

ETI High Performance Connector for Teradata to Microsoft® SQL Server

20x Faster Data Transfer From Teradata to SQL Server Integration Services

The Problem: Inaccessible Data

Companies have chosen Teradata to support their Enterprise Data Warehouse for a reason—storing, manipulating and mining huge volumes of data. However, today's knowledge workers are using multiple reporting platforms for departmental ad-hoc reporting. The challenge, therefore, is rapidly and efficiently moving data from alternate data stores to the knowledge worker.

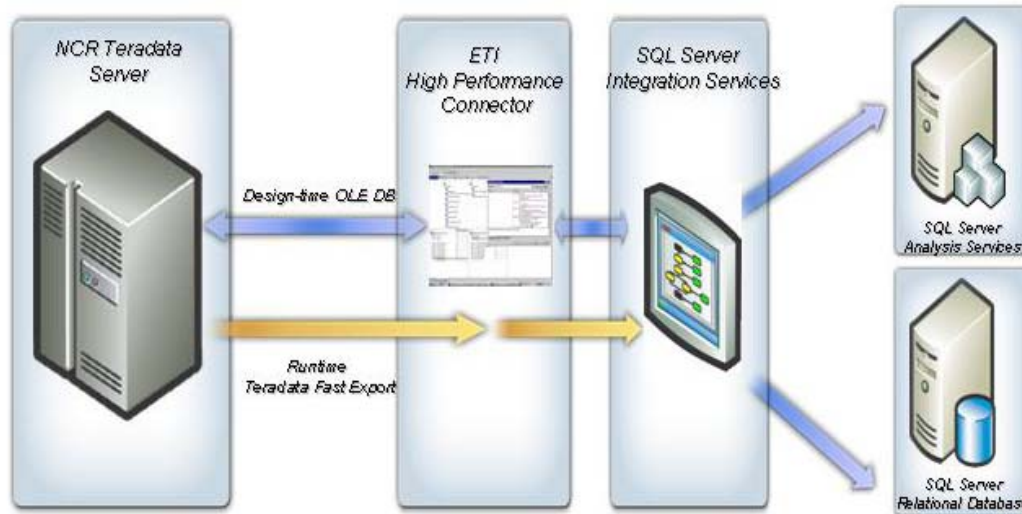

Because departmental requirements for corporate data access are intensifying, your investment in Teradata now requires a low cost, high value, complimentary platform that gives business users better access to the data they need.

"ETI HPCs provide an efficient and fast way to load data from non Microsoft® -based environments into SQL Server 2005. ETI's HPCs remove the requirement to land the data prior to loading it into SSIS, thus reducing the overall cost of storage and enabling Teradata® users to leverage Microsoft's cutting-edge BI Platform seamlessly with their data."

Donald Farmer, group program manager of SSIS, Microsoft

ETI HPC for Teradata to SQL Server Integration Services

ETI's HPC for Teradata to Microsoft SSIS transfers data up to 20 times faster than a standard OLEDB. ETI HPCs are fully integrated into Microsoft SSIS, require no configuration or special training and can be deployed in as little as ten minutes via a standard InstallShield® wizard.

The ETI HPC streams data directly from Teradata to SSIS rather than writing it to an intermediate file, so performance at runtime is comparable to that of the native fast export utility.

ETI and Microsoft share a common vision of what they want for the customer—scalability, usability, low cost of ownership and data transparency. SQL Server 2005 provides an exceptional set of tools for speeding the design and implementation of world-class BI applications, while ETI insures that the users of those applications have easy and fast access to the data they need, regardless of where it resides in the enterprise.

ETI has a range of connectors for high speed data movement to SQL Server 2005. For more information on ETI's High Performance Connectors, contact us at information@eti.com, visit us at www.eti.com or call (800) 856-8800 / (512) 383-3000.
