## **ETI RECOGNIZED AS A “CHAMPION” BY INTERNATIONAL RESEARCH FIRM**

### ***ETI Solution® Garners Multiple Awards from Bloor Research***

**AUSTIN, TX – May 16, 2006** - ETI (Evolutionary Technologies International, Inc.), a global provider of data integration solutions, was recognized as a “Champion” and presented with two Silver Awards in conjunction with Bloor Research’s 2006 ETL Bullseye™ report, an independent, multi-dimensional model for comparative analysis of IT products. ETI, known for providing high performance data integration, offers advanced code generating solutions that Bloor Research says are a unique differentiator in the market. For organizations that have multiple source systems, complex business logic or require access to unusual data sources, Bloor sees ETI as especially suitable; and the number of organizations that fall into one or more of these categories is on the rise.

“[ETI offers a] best in class code generating product and, if this is your preferred option, then ETI should be your favorite,” stated Philip Howard, Research Director of Technology at Bloor, reporting on ETI Solution Version 5. “Given the company’s emphasis on performance, the product’s Java generation is likely to prove the best in the market, which will be important for embedded applications. Finally, ETI is also the place to go if you want to connect to anything unusual.”

“Champion” companies are innovative and present low risk to the end users, handling varied and moderately complex requirements. Bloor evaluated Extract, Transform & Load (ETL) products based on stability and risk, architecture, fit for purpose, performance, implementation and support, then ranked them as “Champions,” “Innovators,” or “Challengers.” Bloor “Champions,” such as ETI, offer products highly regarded by users for their technical quality and support.

“These awards from Bloor Research confirm the unique value ETI products deliver to hundreds of customers every day,” said ETI President and CEO Ron Baker. “Global 1000 businesses need the high performance connectivity and the merging of legacy and modern SOA architectures that we uniquely provide. We are honored by Bloor’s recognition.”

In addition to the status of “Champion,” Bloor also awarded ETI two Silver Awards for General Purpose Products in the Enterprise Class, as well as the Organizational Class.

ETI products provide high performance data integration capabilities for data synchronization and migration and for composite data services for SOA initiatives. As a complement to ETL, EAI, SOA and data warehousing technologies, ETI's data integration platform extends the value of IT investments by providing high performance connectivity and transformations as organizations combine legacy and proprietary data sources with current technologies.

### **About Bloor Research**

Founded in 1989, Bloor Research is one of the world's leading IT research, analysis and consultancy organizations - distributing research and analysis to IT user and vendor organizations throughout the world via online subscriptions, tailored research services and consultancy projects.
